

2025-26 MI Technology Exploration Award – Practitioner Interview Information

Dear Technology Practitioner,

If you're reading this, it's probably because a Michigan high school student involved with the [Aspirations in Computing Community](#) shared it with you. We hope you'll support the student who reached out to develop essential skills that will prepare them for their future career and help them grow personally.

If you are willing and able to meet with the student in person or virtually for 45-60 minutes, the goal is for them to learn about your career in technology in detail (for example, what your workday involves; the easiest, most challenging, and most rewarding aspects of your work; etc.), your career path (for example, education, previous jobs, etc.), and any life lessons or advice you're open to sharing.

The student should raise these discussion topics. They should also show that they have researched your organization or job beforehand and have several other questions ready. The student must request the meeting directly and cannot be a family member.

These guidelines are designed to assist students in developing key interview and engagement skills they can apply in their education and career pursuits, while also motivating them to begin building their professional networks.

Click [here](#) to learn more about students eligible to apply for the Technology Exploration Award through the Michigan Aspirations in Computing Program, which is jointly managed by [NCWIT](#) and the [Lansing ACM-W Chapter](#).

Following your interview, please be on the lookout for a quick survey asking for your feedback about the experience.

Thank you for participating! Sharing your time and expertise is invaluable to future technology practitioners!

Sincerely,

The Michigan Technology Exploration Award Team
